

MPStatus Dashboard

The MPStatus dashboard application provides interactive SMS and email notifications, health stats, and full control of your system's integrated technologies.

Limitless Integration

Integrate with leading cameras, sensors, VMS platforms, analytics, and security technologies—so your mobile deployment works within your existing ecosystem.

The most advanced platforms for mobile security and remote applications. Period.

Fast & Simple Deployment

Our trailers feature tool-free deployment, powered mast, and single-switch operation. Mounted units and towers are just as easy. Deploy them where needed, power up and go!

Intelligent Architecture

Intelligent power architectures, including battery storage, solar, and generator-backed configurations designed for reliable operation across all deployments.

Power is the Platform

Modern mobile security deployments operate in environments where power is inconsistent, unpredictable, or completely unavailable. Unlike fixed infrastructure, mobile platforms must manage fluctuating loads, variable weather, intermittent grid access, and long-term uptime expectations – all without human intervention.

Mobile Pro Platforms are engineered from the ground up as integrated power ecosystems, not just battery boxes or generator trailers. Every power source, load, and circuit is managed as part of a unified system designed to keep security online at all times.

Infrastructure-Grade Reliability

Our platforms are built for demanding conditions, combining intelligent power systems, durable engineering, and dependable uptime for environments where failure is not an option.

Made in the USA

Mobile Pro Systems platforms are designed, built, and supported in the USA, supporting dependable quality, durable construction, and responsive support for long-term deployments.

One Ecosystem. Every Environment

Instead of isolated systems and one-off deployments, Mobile Pro Systems creates a unified ecosystem that connects:

- ✓ Permanent outdoor coverage where traditional cameras can't reach
- ✓ Mobile flexibility for fast-changing operations and events
- ✓ Long-term autonomous protection for remote or hard-to-service locations.

Together, our Sentry Series platforms and mobile trailer systems (Falcon and Commander) form one seamless security footprint that adapts to every environment you operate in.

Commander Trailer Platform

A high-capacity platform built for complex, long-duration deployments that demand flexibility, power, and support for multiple analytics and ALPR workloads.

Falcon Trailer Platform

A rapid-deployment platform that delivers strong coverage fast without sacrificing integration flexibility or field-ready reliability.

Power Sentry Series

Ideal for fixed and semi-permanent perimeters that need continuous coverage tied into existing VMS, monitoring, and security workflows.
