

MPStatus Dashboard

The most advanced remote management platform for mobile security infrastructure. Period.

MPStatus is the intelligence layer behind every Mobile Pro Systems platform. Where other remote monitoring tools offer basic status indicators and simple on/off relay control, MPStatus delivers a complete operational picture — live power levels, device health, fleet visibility, and real-time control over every Commander, Falcon, and Power Series unit in your deployment. It turns your security infrastructure from something you deploy and hope for the best to something you actively manage, with confidence, from anywhere.

Complete Fleet Visibility

View every unit's live operating status, power levels, device health, and GPS location from a single dashboard — with color-coded status indicators that surface issues at a glance.

Programmable Automation

Define time-based schedules and condition-based logic rules that control lighting, alarms, generator operation, deterrence devices, and outputs — no code required.

Limitless Integration

Connect to enterprise alarm systems, VMS platforms, access control hardware, and third-party systems through expandable I/O and a bi-directional HTTP API.

Autonomous Intelligence

MPStatus actively manages your system's hybrid power ecosystem, generator operation, device watchdog monitoring, and battery health — acting on your behalf around the clock.

Platform Intelligence

MPStatus replaces routine intervention with autonomous action. Built-in logic manages generator startup sequences, watchdog monitoring, battery protection, and graceful power deprecation without human input. When something does need your attention, MPStatus reaches out to you.

Built on that foundation, MPStatus helps organizations move from reactive field response to proactive remote management — using the platforms, tools, and workflows they already trust. The result is complete operational visibility without adding unnecessary complexity to day-to-day operations.

Mobile PRO Systems

Smarter Solutions for Remote Applications

Real-Time Visibility

- Single-pane view of every deployed platform across your organization
- Color-coded device tree shows status at a glance
- GPS location and mapping for every connected unit
- Live and historical data, second-by-second

Power Monitoring & Management

- Real-time view of battery, solar, shore, and generator power inputs
- Circuit-by-circuit power consumption visibility
- Battery charge level, fuel level, and estimated runtime
- Generator function, status, and operational data
- Autonomous hybrid power orchestration across all sources

Alerts & Notifications

- Real-time SMS text and email notifications on selected events
- System-event triggers for power, security, and operational thresholds
- Immediate alerts on motion, intrusion, and tamper detection
- Per-user notification filtering and routing

MPStatus Specifications

Remote Control & Automation

- Cycle power to individual components and circuits remotely
- Control top-mast and mid-mast lights, strobes, and audio devices
- Two-way audio engagement from the dashboard
- Remote arm and disarm of security functions
- Interactive scheduling for day-active, off-hours-secured sites
- Configurable event triggers and automated responses

Data, Reporting & Audit

- Historical data review down to the second for every circuit
- Trace audit trail of event notifications and user-driven changes
- Filterable reports across power, security, and operations

Account & Access Management

- Cloud-based — accessible from desktop and mobile devices
- Compatible across the full MPS platform line: Commander, Falcon, and Power Sentry
- Secure remote access from anywhere with an internet connection
